Euler force Wikipedia

In classical mechanics the Euler force is the fictitious tangential force that appears when a non uniformly rotating reference frame is used for analysis of motion and there is variation in the angular velocity of the reference frame s axes

Rotating reference frame Wikipedia

Obviously a rotating frame of reference is a case of a non inertial frame Thus the particle in addition to the real force is acted upon by a fictitious force The particle will move according to Newton s second law of motion if the total force acting on it is taken as the sum of the real and fictitious forces
